

Examination Feedback for EEE6041– Optical Communication Devices and Systems  
Autumn Semester 2013-14

**Feedback for EEE6041 Session: 2013-2014**

**Feedback:** Please write simple statements about how well students addressed the exam paper in general and each individual question in particular including common problems/mistakes and areas of concern in the boxes provided below. Increase row height if necessary.

**General Comments:**

The 1<sup>st</sup> question is generally well answered. It is worth highlighting that the cohort of student students have English problems.

**Question 1:**

Fine. Only minor comments on question 1b (iii): it looks to me that they understand, but they could not answer it in proper English

**Question 2:**

Question 2b is not very well answered. It might be also related to English as well. Question 2c is generally well answered

**Question 3:**

Question 3a is well answered. Only a minor issue needs to be paid attention to: Generally, PIN photodiodes do not exhibit gain

Question 3d is not well answered: only several students mentioned that cut-off wavelength is determined by the bandgap of semiconductor.

**Question 4:**

I feel a little surprised that Question 4 is not so popular. Question 4c is well answered by only several students. This might be related to the background of the cohort of students.
