

## ***Improving the Visibility of the Computer Aided Learning Material***

In previous years there has been feedback on the CAL material indicating that it can at times be difficult to read.

Unfortunately the material is not material that can be edited easily, making it essentially a resource that can be used but not modified.

However it is possible to improve the legibility of the CAL material on your computer. The basic way to do this is to make the image as large on your screen as possible. This can be achieved using the following instructions:

1. Reduce your screen resolution to 800x600 (you can use this step again afterwards to return your screen resolution to its normal setting)
  - a. right click on a blank area of the desktop,
  - b. click on Properties,
  - c. click on Settings
  - d. adjust the screen resolution then press apply
  - e. assuming that you have no problem close the dialog box.
2. Open Internet Explorer and go to the Computer Aided Learning (CAL) pages as usual
3. When clicking on the element you want to look at, right click on the hyperlink and open the element in a new window. (this avoids losing any screen space to the EEE frame)
4. Assuming you are using Internet Explorer, use F11 to push it into Full Screen mode. (This should work on Netscape/Firefox also)
  - a. Also ensure you close your any Search/History/Favourites selector bars on the LHS of the screen as well.

(NOTE: To get your browser out of Full screen mode just press F11 again.)

You should now have a near full screen view of the module which will hopefully make the material easier to work with.
