

Examination Feedback for EEE442 – RF & Satellite Comms  
Autumn Semester 2011-12

### **Feedback for EEE442 Session: 2011-2012**

**Feedback:** Please write simple statements about how well students addressed the exam paper in general and each individual question in particular including common problems/mistakes and areas of concern in the boxes provided below. Increase row height if necessary.

**General Comments:**

Concern that students are not revising whole course - several students only answered 2 questions. Students are not revising the basic notes and looking at the many examples given throughout the course. Student attendance was patchy and hence many will have missed the worked examples in the course. Tutorial sheets give a good guide to the types of questions that will be asked in examinations so vital these are attempted.

**Question 1:**

Final part on lossy cable tested many students. Overall a well answered question.

**Question 2:**

Answers from parts a and b were bookwork yet students failed to revise. The design of the antenna was covered during the lectures, those who did not attend will have missed out.

**Question 3:**

Part b caught students out as it has not been asked very often before.  
Part c was covered in the lectures and on the tutorial sheets but many students could only manage part of the answer.

**Question 4:**

Few students attempted this question yet it was straight forward. It was towards the end of the course and perhaps students did not attend.
