

Examination Feedback for EEE206 – Communication Systems
Spring Semester 2009-10

Feedback for EEE206 Session: 2009-2010

Feedback: Please write simple statements about how well students addressed the exam paper in general and each individual question in particular including common problems/mistakes and areas of concern in the boxes provided below. Increase row height if necessary.

General Comments:

Many students are only revising parts of the module and not preparing themselves by completing the tutorial sheets and going over past exam papers. Noticeable that several students answered 2 questions well then had a very poor final question.

Question 1:

Popular question on amplitude modulation. No significant problems arose.

Question 2:

Many students did not revise the stereo FM lecture and find reading the values of Bessel functions from a plot or table difficult. More practice needed as there are 2 questions on the tutorial sheets as well as a worked example in the lecture.

Question 3:

Question on pulse code modulation – commonly appears on the exam paper as several lectures are devoted to it. Mixed answers so difficult to spot any common problems.

Question 4:

Popular question on communication theory and multiplexing. Well answered overall. No obvious common problems.
