

Marking Scheme for EEE105 (Electronic Devices)

Advice for Students

This year the Department is undertaking an experiment to help students keep up to date with the taught material in a course, and hopefully improve the examination pass rate.

In the past some students have had problems in keeping up to date with some courses, in the relatively free study environment of a University, only recognizing that they have a problem when it is too late.

For EEE105, the marks for the course will be awarded on the following basis:

Tutorial Attendance and Question Completion:	14 marks	(17.5%)
Interim Examination:	6 marks	(7.5%)
Final Examination	60 marks	(75%)
Total:	80 marks	(100%)

- The final exam is in the S1 examination period in January. It will follow the normal rubric, which is to answer three questions from a choice of four, where each question is worth 20 marks.
- The interim examination is held in week 7, during the tutorial, and will consist of 12 very short questions, each worth $\frac{1}{2}$ a mark.
- The new aspect will be that there are 14 marks available for attending tutorials and keeping up to date with the tutorial sheets. The record of your attendance and progress will be recorded by your senior demonstrator.
- At the beginning of the year you will have 17 marks in credit.
 - This means you will still score the maximum 14 marks, even if you lose three marks for whatever reason.
- Each time you miss an EEE105 large group tutorial class you will lose two marks.
 - If you are more than 10 minutes late you will lose one mark.
 - If you are more than 30 minutes late you will lose both marks.
- All working in answering EEE105 tutorial questions should be carried out using your lab notebook, working from the back (leave the front to record your normal labwork). Each week your senior demonstrator will check your progress. There are deadlines for each tutorial question set. If you have not completed all the questions in a particular tutorial set by the deadline you will lose a mark. The deadlines are set a week after the tutorial I expect you to have completed the material by, and the material is attemptable at least a week before that expectation in nearly all cases.
 - It should be noted that while the tutorial session is an opportunity to do the questions, it is **not** the only opportunity. You are expected for all courses to work on the tutorial questions in your own time and use the tutorials to ask either the senior demonstrator or module lecturer about the things you do not understand fully.
- If you are ill on a tutorial day, you must let your senior demonstrator know by email, and fill a self-certification of sickness form. You should note that if you are ill for more than a week, or regularly suffering symptoms then you must go to student health (mainly for your own benefit, but also to obtain a sickness note for the Department as clearly your medical condition is affecting your studies).
 - As for any other formal examination, you must get a medical note from a doctor if you miss the interim examination in week 7.
