

Examination Feedback for EEE6226– Future Electronic and Electrical Engineering  
Trends  
Spring Semester 2014-15

**Feedback for EEE6226 Session: 2014-2015**

**Feedback:** Please write simple statements about how well students addressed the exam paper in general and each individual question in particular including common problems/mistakes and areas of concern in the boxes provided below. Increase row height if necessary.

**General Comments:**

All students who attended regularly, submitted the assessed work and took part fully in the research for the presentation and the presentation itself achieved good marks (within the low II.1 – upper first range).

The main areas where marks were lost were (in order of importance):

- 1) Simply failing to submit the assessed work in semester 1, or doing it very poorly.
- 2) Scoring exceptionally low in the peer assessment. It was very noticeable that individuals who were marked very obviously up or down, were marked similarly by all their peers. In other words, judgments were consistent and hence, I believe, reliable.
- 3) Some candidates had very poor attendance, quite a few losing between 3-6% marks out of the 10% available just for attendance.

**Question 1:**

This module was assessed by course work alone.
