Examination Feedback for **EEE6432 – Wireless Packet Data Networks and Protocols**
Spring Semester 2014-15

Feedback for EEE6432 Session: 2014-2015

Feedback: Please write simple statements about how well students addressed the exam paper in general and each individual question in particular including common problems/mistakes and areas of concern in the boxes provided below. Increase row height if necessary.

General Comments:

The students addressed the questions well in general.

Question 1:

Some students are confused with the terms of contention-based and conflict-free.

The performance analysis part proved difficult to over 50% of students.

Question 2:

In general, the students demonstrated a good understanding of Stop-and-Wait ARQ protocol. Most of them did quite well in 2b when the round trip time is less than the time-out time.

However, most students failed in 2c when the round trip time is larger than the time-out time.

Question 3:

 The students have demonstrated a very good understanding of cyclic codes.

Question 4:

Only a handful of students attempted this question.

The students did well in 4c on the principle of spreading and dispreading. They did not explain well on why different services in a WCDMA have different coverage and cell breathing.
